

WHAT DO 14 OF THE TOP 25 INDEPENDENT  
OPTICAL LABORATORIES HAVE IN COMMON???

## ULTRA-PURE WATER

FROM PURE WATER WORKS.

PCZ II 600/1200

State Certified Laboratory Services

Waste Reduction / Neutralization

Award Winning Service

*Water is one of the critical components in any Optical Laboratory. We "baseline" the water quality in the lab and put you in control of that quality. We design, install, and train on site staff to understand the importance of quality water which leads to lower costs and less "breakage". Our knowledge, service, and technical support are legendary. PURE WATER WORKS stocks all components for next day shipping.*

*For more than 15 years PURE WATER WORKS has been a partner to optical laboratories across the U.S., Canada, Caribbean, and Mexico. Our in house design team produces ultra-pure water systems custom to the laboratories size and water quality needs. Our in house certified water testing laboratory starts at the beginning with the facility feed water to design a system that provides the highest quality water every minute of every day. Our systems produce water at less cost per gallon than any other system. These are designed for ease of operation, maintenance, and built with quality for a life time of performance. All our high purity water systems are expandable so we can grow with you.*

From .5 gpm to 50 gpm let PURE WATER WORK for you!

*With a company wide commitment to green technology and resource management we provide the highest quality water with the greatest efficiency with lower costs and less waste of our most precious resources.*

*We have eliminated the need for outside contracting for DI canisters putting your lab in total control of quality and expense. Our Water Quality Association (WQA) certified staff employs the most recent technological innovations in all our systems including the newest Electronic Deionization (EDI) with no resin exchanges at all!*
